

When the context of this project was updated to be an individual project of reduced scope, I largely copied existing user stories from my previous team per instructions. However, there are a select few user stories which I copied that, in hindsight, do not apply to my project or are outside the scope of what I could reasonably achieve.

- (1) - User Story 2.5: *“As an admin, I want to be able to generate reports for the restaurant for sales, revenue, and inventory, so that I will be able to review them with my team and analyze our business performance”*

This story was valid for a project whose scope comprised the likes of inventory and product management, but my reduced-scope project only specified the functionality of restaurant reservations. As such, this user story (as written) does not logically apply to my project, and was a mistake to copy.

- (2) - User Story 1.7: *“As a user, I want to receive a confirmation email after placing my reservation, so that I receive a receipt containing my booking details.”*
- (3) - User Story 1.8: *“As a customer, I want to receive a reminder email about my upcoming reservation so that I don’t forget my upcoming reservation.”*

These user stories are a different, applicable case, but escaped my capabilities for the time I had left. The extra technologies required to implement both stories are beyond the scope of my understanding, and without another week or more specifically to mull over documentation and research, I do not have the time to figure out an implementation for either.

- No implementation of either user story was attempted. Time constraints required focus on the remaining functionalities and build automation of the project.
- No partial progress exists towards either user story, as a result.
